

The OCEPC has recently renewed the Automated External Defibrillator (AED) program with **AEDventures** and **LifeServers, Inc.** – the only Ohio based companies that offer AEDs to Ohio schools with onsite support and service. Please find attached a flyer that highlights some of the details of the program. Additionally, this program through the OCEPC and each of its member co-ops offers access to the latest AED and the most competitive price available on the market – the LifePak CR2. Below are a few features of this new AED, which is compatible with and is the same brand used overwhelmingly by Fire/EMS and Hospitals in the state of Ohio.

**The Physio-Control LIFEPAK® CR2 is the first FDA-approved AED with built-in remote monitoring capabilities.** The AED has the capability to connect to online program management software on a daily basis to let the system know it is functioning as expected. This alleviates the need to manually check your device and provides peace of mind that your AED will be ready to use in case of an emergency.

**Key features of the Physio-Control LIFEPAK CR2 include:**

- Wireless connectivity
- Metronome and CPR coaching
- Child mode delivers lower energy levels appropriate for young children without having to change electrode pads
- Bilingual capabilities allow rescuers to toggle between two pre-set languages
- Available in fully or semi-automatic options
- IP55 rating

If you would like to learn more about the Physio-Control LIFEPAK CR2 or other aspects of the program, please call Doug Huffman with AEDventures at 330-903-0880 or by email at [doug@aedventures.com](mailto:doug@aedventures.com).

Please be sure that your AEDs are regularly being checked. Ensure they have updated batteries and electrodes and that people know where they are and are trained on how to use them. Sudden Cardiac Arrest (SCA) is the number one killer in the world and our partners at AEDVentures and LifeServers are available to assist you any way they can to help ensure your school district gives someone the very best chance to survive.

The OCEPC and each of the purchasing co-ops in Ohio have renewed their agreement with AEDventure, a LifeServers, Inc. affiliate company, to offer Ohio schools with the very best AED programs available.

- ✔ As part of the renewal, AEDventure has agreed to lower the previous AED pricing and will beat any battery/electrode pricing!
- ✔ On-site service by our professionals ensures your AEDs are up to date and ready to go.

Our two AEDs offered through this program are the two highest energy AEDs on the market with both capable of delivering more than 350 joules of energy.

**DID YOU KNOW?**

Energy levels of AEDs can make the difference as to whether or not a victim of Sudden Cardiac Arrest survives. Every other AED on the market shocks at 200 joules or less, however, unfortunately too many school nurses and decision makers are unaware of this extremely important feature.
