Subject: PJM Peak Report for 6-19-2018
Attachments: 06.19.18 PJM-PLC Forecast.pdf

The PJM peak load forecast for today is currently 134,560 MWs. There is a high probability of the peak today being above the 133,000 MW control target. Scattered thunderstorms are in the forecast for Western PJM (Chicago into Ohio) which could reduce the Peak load today. The control target was set to ensure that the 5 peak days were captured, but at this level there is a reasonable chance higher peak loads will be experienced later in the summer. An update will be sent early afternoon to update any changes to the forecast.

Yesterday's peak load was 149,169 MWs, based upon PJM's preliminary estimate.

Real Time PJM RTO Total load can be tracked here <https://dataviewer.pjm.com/dataviewer/pages/public/load.jsf>

Annual capacity costs are set by your usage contribution to the peak hour during the 5 peak days from June through September, multiplied by the auction clearing price. Any usage reduction during these hours can reduce your costs starting in June of the following year. As the PJM forecasted usage approaches or exceeds the Estimated Control Target, you may want to reduce your organization's expected usage.

The capacity costs you pay go to power generators who can guarantee availability. IGS Energy sets an estimated control target based on the previous summer's peaks and will adjust the target as the current summer progresses. Annual clearing prices are determined by PJM through auctions. More information about PJM can be found at www.PJM.com
