**Subject:** PJM Peak Report for 6-24-2019  
**Attachments:** 06.24.19 PJM-PLC Forecast.pdf

### This Week

Above average temperatures forecasted across the PJM region in the upper 80s to low 90s late this week have lifted load forecasts above our control target level on 6/27 and 6/28. We'll continue to monitor how forecasts track through the week and send a follow up report on Wednesday.

Real Time PJM RTO Total load can be tracked here <https://dataviewer.pjm.com/dataviewer/pages/public/load.jsf>. Select 'PJM RTO Total' from the drop down to view the total PJM demand for the day.

Annual capacity costs are set by your usage contribution to the peak hour during the 5 peak days from June through September, multiplied by the auction clearing price. Any usage reduction during these hours can reduce your costs starting in June of the following year. As the PJM forecasted usage approaches or exceeds the Estimated Control Target, you may want to reduce your organization's expected usage.

The capacity costs you pay go to power generators who can guarantee availability. IGS Energy sets an estimated control target based on the previous summer's peaks and will adjust the target as the current summer progresses. Annual clearing prices are determined by PJM through auctions. More information about PJM can be found at [www.PJM.com](http://www.PJM.com)
