Subject: PJM Peak Report for 7-8-2019
Attachments: 07.08.19 PJM-PLC Forecast.pdf

Today

Today has a low probability of being a peak day. The 'Current 2019 Summer Peaks' section has been updated to include the 5 highest metered peak load hours so far this summer for reference.

This week

Wednesday 7/10 is currently forecasted as a possible peak day. A report will be issued that morning with the latest forecasted peak. Looking farther ahead, the week of 7/15 currently has temperatures forecasted in the low 90's across PJM and will have a high potential to set peak days.

Real Time PJM RTO Total load can be tracked here <https://dataviewer.pjm.com/dataviewer/pages/public/load.jsf>. Select 'PJM RTO Total' from the drop down to view the total PJM demand for the day.

Annual capacity costs are set by your usage contribution to the peak hour during the 5 peak days from June through September, multiplied by the auction clearing price. Any usage reduction during these hours can reduce your costs starting in June of the following year. As the PJM forecasted usage approaches or exceeds the Estimated Control Target, you may want to reduce your organization's expected usage.

The capacity costs you pay go to power generators who can guarantee availability. IGS Energy sets an estimated control target based on the previous summer's peaks and will adjust the target as the current summer progresses. Annual clearing prices are determined by PJM through auctions. More information about PJM can be found at www.PJM.com
