Subject: PJM Peak Report for 8-20-2019
Attachments: 08.20.19 PJM-PLC Forecast.pdf

Today

Today has a high likelihood of being a peak day, with PJM's forecast currently set at 144,350 MW. Thunderstorms are forecasted across much of PJM through the afternoon and will be worth monitoring as we get closer to the daily peak. We'll follow up later in the day on how demand is tracking.

Wednesday

PJM is forecasting a peak load of 143,090 MW for 8/21 which would place it in the top 5 peak loads this summer as well. After Wednesday system load for the week is expected to drop below our control target level on moderating temperatures.

8/19

Preliminary load for yesterday is 142,104 MW. This is good enough for the 3rd highest peak of the summer so far. This number will be updated as PJM receives actual meter data from utilities.

Real Time PJM RTO Total load can be tracked here <https://dataviewer.pjm.com/dataviewer/pages/public/load.jsf>. Select 'PJM RTO Total' from the drop down to view the total PJM demand for the day.

Annual capacity costs are set by your usage contribution to the peak hour during the 5 peak days from June through September, multiplied by the auction clearing price. Any usage reduction during these hours can reduce your costs starting in June of the following year. As the PJM forecasted usage approaches or exceeds the Estimated Control Target, you may want to reduce your organization's expected usage.

The capacity costs you pay go to power generators who can guarantee availability. IGS Energy sets an estimated control target based on the previous summer's peaks and will adjust the target as the current summer progresses. Annual clearing prices are determined by PJM through auctions. More information about PJM can be found at www.PJM.com
